WEATHER BUREAU

MARCH 1936

TEMPERATURE

The mean temperature for March was generally above normal throughout Canada and Newfoundland from the Rocky Mountains eastward to the Atlantic Ocean. The exception was the Lower Mackenzie River valley where there were small deficiencies. Mean temperatures were below normal from the Rocky Mountains westward to the Pacific Ocean.

On Vancouver Island mean temperatures were generally two degrees below normal. Along the coast of the mainland temperatures were normal to five degrees below normal with the largest deficiencies occurring in the region about Prince Rupert. In the Fraser River valley reports indicate that temperatures were normal to two degrees below normal. In the northern interior of British Columbia moderately large excesses are indicated from available reports.

In the Peace River valley in Alberta the mean temperatures were in excess of normal by three to seven degrees and four to eight degrees in the Athabaska River valley. In the agricultural region about Edmonton and in the North Saskatchewan River valley temperatures were two to six degrees above normal. From Red Deer and Lacombe southward to Calgary and westward to the British Columbia-Alberta boundary temperatures were normal to three degrees below. In the South Saskatchewan River valley there were excesses of one to three degrees but along the International Boundary temperatures slightly below normal were reported.

In Saskatchewan reports indicate that the part of the province north of Prince Albert was six to nine degrees above normal. Along the North Saskatchewan River valley there were excesses of five to ten degrees and three to eight degrees in the Scott-Saskatoon district and eastward to the Saskatchewan-Manitoba boundary. In southern Saskatchewan the mean temperatures were two to six degrees above normal.

The agricultaral region of southern Manitoba was generally two to five degrees above normal with the largest excesses occurring in the Souris River valley. In the northern lake region mean temperatures were generally four or five degrees above normal.

The region about the Lake of the Woods in Ontario had mean temperatures normal to two degrees above normal while eastward to Lake Superior there were excesses of two to five degrees. From Sioux Lookout and Lake Nipigon eastward to James Bay reports indicate excesses of six to eight degrees above normal temperatures. Between Lake Superior and the Ontario-Quebec boundary mean temperatures were generally four to seven degrees above normal. Along the shore of Lake Huron, in the Niagara Peninsula and in Essex County in southern Ontario there were excesses of two or three degrees. The remainder of southern Ontario had mean temperatures four to seven degrees above normal with the largest excesses occurring in the eastern Lake Ontario counties and in Middlesex and Lambton counties.

In Quebec along the Ottawa River valley and the Upper St. Lawrence temperatures were five to seven degrees above normal. Along the Middle St. Lawrence River and southward to the International Boundary temperatures were in excess of normal by five to ten degrees. In the Lake St. John region mean temperatures were eight to eleven degrees above normal while in the Laurentian Hills and westward to the Ontario-Quebec boundary there were excesses of three to eight degrees. Along the Lower St. Lawrence River and north shore of the Gulf mean temperatures were six to ten degrees above normal.

Mean temperatures were well above normal in all three Atlantic Provinces. In New Brunswick temperatures were in excess of normal by six to ten degrees. Mean temperatures were eight to ten degrees above normal in Nova Scotia except along the Atlantic coast, particularly at Halifax where an excess of only six degrees above normal was reported. On Prince Edward Island mean temperatures were about nine degrees above normal.

Available reports indicate that Newfoundland had temperatures eight to nine degrees above normal except at Cape Race where the excess was only five degrees. At the eastern end of Hudson Strait temperatures were normal, increasing to seven degrees above normal at the western entrance. Along Hudson Bay the March mean temperatures were seven degrees above normal at Chesterfield but only four degrees above normal at Churchill.

PRECIPITATION

On Vancouver Island precipitation was generally 5 to 40% above normal except on the extreme southeastern tip of the Island where deficiencies of about 5% occurred. Along the northern shore of the mainland reports indicate slightly below normal precipitation. In the Fraser River valley excesses of 20 to 70% were reported while in the Okanagan River valley precipitation was generally 20 to 80% below normal except locally at Penticton where an excess above normal of 40% was reported.

In the Peace and Athabaska River valleys in Alberta deficiencies of 15 to 50% occurred. In the agricultural region about Edmonton and Wetaskiwin and in the North Saskatchewan River valley precipitation was 10 to 55% below normal. The district about Calgary and Olds had 40 to 75% below normal precipitation but in the Red Deer River valley there were excesses of 25 to 100% and 70% generally. In the extreme southwestern corner of the province about Cardston deficiencies of about 30% were reported. In the Oldman, Bow and South Saskatchewan River valleys the March precipitation was normal to twice the normal amount.

The Cypress Hills and Wood Mountain districts in Saskatchewan had 20 to 40% below normal precipitation while the region from Empress through Swift Current to Moose Jaw had excesses of 25 to 100% and 70% on the average. That section of the province from Kindersley to Last Mountain and northward to the North Saskatchewan River had deficiencies of 20 to 80% and 75% generally. The southeastern part of the province from Regina to the Saskatchewan-Manitoba boundary and southward to the International Boundary had heavy precipitation where normal to three times the normal precipitation was reported.

The agricultural region of Manitoba had above normal precipitation by 10 to 100%; the exception being at Morden where a deficiency of 25% was reported. In the northern lake region of the province excesses of 20 to 120% occurred.

Throughout northern Ontario the March precipitation was generally well above normal. In Rainy River, Kenora and Thunder Bay districts there were excesses of 20 to 100% and 65% on the average. In Cochrane, Algoma, Temiskaming and Sudbury districts precipitation was 35 to 140% above normal and 70% generally. The Lake Huron and western Lake Erie counties in southern Ontario had precipitation 10 to 65% below normal and 40% generally. The remainder of southern Ontario had above normal precipitation. In the Georgian Bay counties excesses of 40% on the average were reported. In the Niagara Peninsula and in western Lake Ontario counties excesses of 45 to 140% were reported while in the eastern Lake Ontario counties normal to more than three times the normal amount of precipitation occurred. The heavy precipitation and rapid thawing of the snow covering caused floods in this region during the month.

Along the Ottawa River in Quebec excesses above normal of 10 to 120% were reported and about 55% generally. In the Laurentian Hills and Lake St. John region precipitation was 30 to 200% above normal and 75% generally, except locally about Lake St. John where moderate deficiencies were reported. Along the Upper and Middle St. Lawrence River and southward to the International Boundary precipitation was normal to three times the normal amount and 100% above normal on the average, though small local deficiencies were reported. Along the St. Lawrence River from Quebec City to the mouth of the Saguenay River precipitation was generally 35% above normal. Reports indicate moderately deficient precipitation along the north shore of the Gulf of St. Lawrence.

In New Brunswick precipitation was about 15% below normal in the Nepisiquit and Lower Miramichi River valleys. The remainder of the province had 10 to 140% above normal precipitation and 60% generally except locally at Woodstock where a deficiency of about 20% occurred. Along Chignecto Bay and the Basin of Minas in Nova Scotia precipitation was generally 30% above normal and 40% along the Bay of Fundy. Along the Atlantic seaboard precipitation was 5 to 25% above normal and about 10% below normal on Cape Breton Island. On Prince Edward Island precipitation was generally 10% above normal, while available reports indicate that precipitation varied from 15% below normal to 30% above normal in Newfoundland.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Sg denotes depth of snow on ground in inches, where given.
